The Object Management Group (OMG) is an international, open membership, not-for-profit technology standards consortium. Formed in 1989, OMG is composed of a fading list of vendors, enterprises, academic institutions and government agencies that have joined to create, develop, and promote a comprehensive set of object technology standards for industrial, commercial and individual use. OMG provides a neutral and unbiased environment in which vendors and end-users can jointly develop software and standards that enable an interoperable, open systems architecture. The OMG is the developer of the Unified Modeling Language (UML), the foundation for service-oriented architecture.
